# Caspar Overview

## FIND DEBTORS & INDIVIDUALS FAST

Caspar has been designed specifically with Skip Tracers and Investigators in mind. Our search portal gives you access to hundreds of millions of records both historical and current data, neatly all in one universe data set, searchable from a variety of parameters and variables. Our Online searching platform can be accessed 24 hours a day, 7 days a week from anywhere around the world and from any device with an internet connection.

## SEARCH COMPREHENSIVELY WITHOUT ANY WORRIES

Caspar is unlimited searching. You are not restricted to a certain amount of searches per seat. Whilst others place these restrictions on the seat users, many clients have realised that with effective tracing of individuals, these restrictions can often cost a client far too much at the end of a billing cycle and not allow a client to trace a person effectively because of the fear of costs. Caspar allows you to go beyond the boundaries of just the individual and extend your investigation out to other people of interest with no additional costs.

## DATA QUALITY & QUANTITY

Caspar hosts a substantial historical data set of over 400+ million records collected over a 20 year period, together with in excess of 15+ million current records, appended, validated and replenished monthly. Others claim to have comprehensive data and simply have far “too many gaps” in their tracing portals leaving clients unable to follow the whereabouts of an individual after a particular period of time or year. “Bells and Whistles” like Google Maps do not locate individuals, quality data does and that’s what Caspar will do for you. We have over 100 sources of data, from public to proprietary to data that others simply do not have within their tracing portal, “you will notice the difference when comparing results.”

## CREATE MULTIPLE USERS TO MAXIMIZE USAGE

With Caspar, once you subscribe to the seating plan of preference, you have the ability to create one admin user within your company, who can control, remove and issue further username and passwords for access to multiple users. E.g. Tony from company XYZ purchases a 10 seat plan; the first seat can be issued to Tony as administrator and now Tony has the ability to set up as many users as required to search on Caspar. Although Tony has set up 20 users, only 10 (which includes Tony as the administrator) can simultaneously access Caspar at the one time. The benefit of this is that the administrator (in this case Tony) has the ability to disconnect a user’s session if they are idle and allow others to use Caspar that need it. Also, with many companies now having staff working different hours, this feature allows usage without additional seat purchasing as staff can all be issued with a username and password for rostered access.

# Key Features of Caspar

## Caspar gives you the ability to do the following:

- ▶ Reverse search on phone numbers and other filters
- ▶ Usual searching criteria such as name; address; phone number; wild card searching and cross matching
- ▶ Display the results of an entire street with one easy search
- ▶ Auto tracing feature with weighted results for inexperienced users or larger corporations who need to get through volumes fast
- ▶ Relative searching and locating siblings with one simple search
- ▶ Display the historical results of an occupancy history at a particular address
- ▶ Display the historical results of an individual's movement or resident history
- ▶ Real Estate data (Sale & Rental)
- ▶ Court Judgement Information
- ▶ Deceased Estate records
- ▶ Exporting and Printing page results
- ▶ ABN Lookup
- ▶ User Account Statistics
- ▶ Review your previous search history in activity
- ▶ Search for emails and reverse email search (Records will now show if an email is attached to it)
- ▶ Turn on or off smart filter searching which is automatically \*wildcard on any field (no \*asterix needed) you can specifically search by un-ticking the relevant box
- ▶ Auto- street search address populates when a suburb is only known but spelling name of street is unknown (very popular and most requested)
- ▶ Auto suburb corrector and populates as a predictor
- ▶ Sorting of addresses is now possible when searching and entire street or suburb, with or without numbers
- ▶ Partial email search predictor search when smart filter turned on
- ▶ Partial telephone number search
- ▶ Sort by all headers

“Constantly adding new, fresh and unique data to Caspar”
